

An eye for fields of vision

EU-PREPARED

EU-Prepared

The Orlaco EU-Prepared system is excellently suited for having a good view on the 'blind spot' on the side of your vehicle. The high mounting offers an optimum view on the side and the front of the vehicle. This system can easily be transformed to an EU-Ready system.

Compulsory viewfield The Netherlands and Belgium

Camera view EU-Prepared

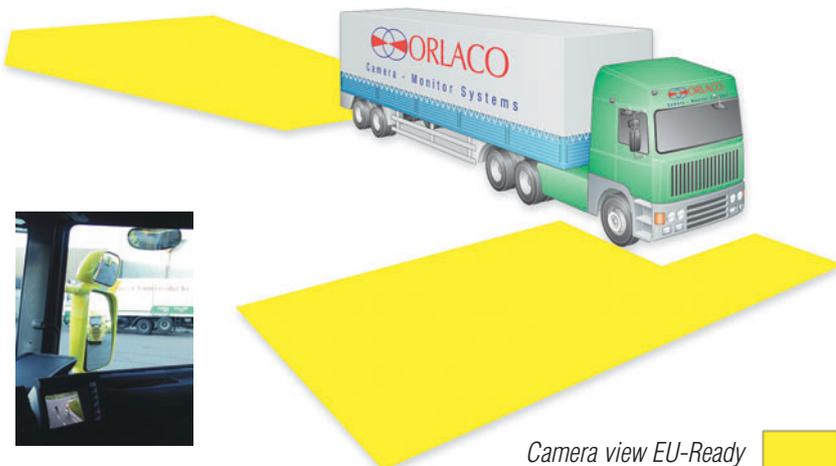

Risky and dangerous situations can occur when a vehicle reverses or turns left or right. The drivers of current commercial vehicles are not able to see anything happening in the area falling between ten to fifteen metres behind their vehicle. In order to solve this problem, it is possible to add a rear vision camera to one of Orlaco's current camera vision systems. As an extra option, it is also possible to add a route-navigation system and have this image projected onto the same monitor as the camera system.

Why choose for Orlaco?

- The possibility to manoeuvre vehicles safely and quickly when turning left/right or reversing
- **All blind corners** are visible
- **Excellent European quality**, certified by several leading commercial vehicles manufacturers

EU-READY

Camera view EU-Ready

EU-Ready

At the moment there are new European guidelines being drafted, whereby the size of the vision fields of commercial vehicles will be extensively enlarged and where it will be possible to make use of cameras for look-down and front mirror viewing. These new guidelines will as of the year 2006 be compulsory for all new commercial vehicles throughout Europe. We have called this system EU-Ready.
